Summary

Software Developer with ~2 years of experience building scalable B2B web applications. Experienced in AngularJS and modern JavaScript, with hands-on experience in React.js. Skilled in developing responsive user interfaces, integrating RESTful APIs, and optimizing frontend performance.

Technical Competencies

Frontend Development: React.js, Next.js, JavaScript (ES6+), AngularJS, HTML5, CSS3, Bootstrap, Tailwind CSS

Backend & APIs: C#, .NET Core, ASP.NET Core Web API, RESTful API Integration

Databases: SQL Server, MongoDB

Tools & Practices: Git, GitHub, Vercel, Swagger, Fiddler, Postman, Chrome DevTools, API Testing, Debugging

Work Experience

Software Developer

Aug 2024 – Present

Calculus Systems Pvt. Ltd.

- Engineered reusable, responsive UI components (forms, dropdowns, modals, date pickers) using **JavaScript (ES6+), AngularJS, Bootstrap, HTML5, and CSS3**, ensuring cross-browser compatibility.
- Implemented client-side validation and form handling using AngularJS directives and regex, improving data accuracy and user experience across booking workflows.
- Integrated frontend applications with **ASP.NET / .NET RESTful APIs**, handling API consumption, error states, and data validation for multiple travel services.
- Contributed to **B2B travel platforms (ShopHotels, FarePort)** supporting hotel search, quotation, booking, and secure payment processing.
- Delivered dynamic quotation and booking interfaces with real-time pricing, filtering, and validation, enhancing user interaction and booking efficiency.
- Integrated **Elavon payment gateway** and third-party APIs (**Hotelbeds, Expedia, DIDA**), ensuring reliable transaction flows and vendor data integration.
- Created an **internal quotation system** for flights, hotels, and transfers with real-time pricing logic and PDF generation.
- Contributed to the development of an end-to-end **Meet & Assist booking interface** with API-driven availability and passenger management.

Personal Projects

GoTrip – Travel Search App [demo] | [github]

Tech: React, Next.js, JavaScript, MongoDB, Bootstrap, REST APIs, Vercel

- Created a **responsive travel search platform** with reusable UI components, date pickers, filters, and dynamic search.
- Integrated multiple travel providers including **Amadeus API** and **Skyscanner API** to fetch real-time flight data with provider fallback architecture.
- Designed backend API routes in **Next.js** for secure server-side token handling, request normalization, and third-party API orchestration.
- Optimized frontend performance using **lazy loading** and dynamic imports, achieving Lighthouse **Performance score of 85+**, Accessibility **95+**, and SEO **95+**.

Employee Management System – HR Web App [github]

Tech: React, ASP.NET Core Web API, SQL Server, EF Core, Tailwind

- Built a **full-stack HR application** with employee CRUD operations, search, filtering, pagination, and role-based access.
- Developed a reusable **React frontend** with controlled components, form validation, protected routes, and responsive UI using **Tailwind CSS**.
- Implemented **JWT-based authentication and authorization**, enabling secure user login, token validation, and access-restricted API endpoints.
- Designed and implemented RESTful APIs in ASP.NET Core, leveraging EF Core for efficient data access, filtering, and pagination.

Education & Certification

- B.E. in Information Technology** | Mumbai University
A.P. Shah Institute of Technology | CGPA: 8.57/10
- UI Full Stack Development with React** (Hyderabad)
